National Register of Antipsychotic Medications in Pregnancy

What is National Register of Antipsychotic Medications in Pregnancy?

Monash Alfred Psychiatry Research Centre is running a National Register of Antipsychotic Medications in Pregnancy (NRAMP) to evaluate the safety of psychiatric medications for mothers and babies during pregnancy. NRAMP plans to develop evidence-based guidelines for the best use and effect of psychiatric medication during pregnancy, birth and the postnatal phase, thereby assisting healthcare professionals and women with mental illness to make informed decisions about appropriate treatment options, and encourage safer outcomes for mother and baby.

Who can join NRAMP?

• Women who are taking, or have taken, psychiatric medication during pregnancy
• Women who are pregnant or who have had a baby in the last 12 months
• Women who reside in Australia
• Women who are at least 18 years old

Valuable research for our community

We conduct research on the risks of all psychiatric medications in pregnancy and breastfeeding, which we feel is an important public health initiative.

Location

Women will be seen in the Monash Alfred Perinatal Psychiatry Clinic, which is located on the 4th floor of Monash Alfred Psychiatry Research Centre at 607 St Kilda Road, or contacted by telephone. There are no out-of-pocket expenses for women to be part of this study.

Contact Us

Please contact Ms Alisa Turbić on 9076 6591 if you have any queries about getting involved in NRAMP research study. Alternatively, you may email Alisa at maprc-nramp@monash.edu with any enquiries.

We look forward to hearing from you!
